

What is a Kangaroo?

A kangaroo is an animal found only in Australia, although it has a small relative, called a wallaby, which lives on the Australian island in Tasmania and also in New Guinea.

Kangaroos eat grass and plants. They have short front legs, but very long and very strong back legs and tail. These are that they use for sitting up and for jumping. Kangaroos have been known to make forward jumps of over eight meters, and leap across fences more than three meters high. They can also run at speeds over 45 kilometers per hour.

The largest kangaroos are the Great Gray Kangaroo and the Red Kangaroo. Adults grow to a length of 1.60 meter and weigh over 80 kilos.

Kangaroos are marsupials. This means that the female kangaroo has an external pouch on the front of her body. A baby kangaroo is very tiny when it is born, and it crawls at once into the pouch where it spends its first five months of life.

1. The type of the text above is
 - a. Description
 - b. Discussion
 - c. Report
 - d. Analytical exposition
 - e. Hortatory exposition

2. What is the purpose of the text?
 - a. To inform the reader about kangaroo
 - b. To explain how kangaroo exist
 - c. To persuade the reader by the kangaroo
 - d. To tell the reader about kangaroo
 - e. To ask the reader about kangaroo

3. What is the text about?
 - a. An animal found Australia
 - b. Kangaroo
 - c. A Wallaby
 - d. Island of Tasmania
 - e. The largest kangaroo
